

Mobile Track

'...knowing is everything'

Mobile Track is **Crystal Ball's** innovative mobile phone tracking application developed for both business and consumer markets. Businesses can now track employees, VIPs, international users as well as their company and grey fleet vehicles. Consumer use can include the tracking of children, the elderly, the vulnerable, vehicles and for outdoor leisure pursuits.

Customers can access **Crystal Ball**, anywhere in the world, at any time, allowing them to track and report live on the whereabouts and activity of the handset. It is a true live web based gps tracking system.

Mobile handset tracking is the next generation of tracking, offering an alternative to 'black boxes' installed in your car. **Crystal Ball's** powerful mobile tracking app works on your gps mobile phone, and offers additional benefits over traditional vehicle tracking, providing complete visibility at all times.

Mobile Track features include; live web based tracking, journey status indicators, geo-fences, alarms, current and historical day logs and scheduled email reports. Couple all those features with a highly detailed, yet easy to use reporting structure, and you begin to see exactly why **Crystal Ball** is such a highly versatile and scalable tracking system.

To start tracking, users simply need any one of the supported handsets (see www.crystalball.tv) combined with a data tariff on their mobile voice account. The app is either easily downloaded over the air or transferred directly from a PC.

features Mobile Track		reports	
alarms	y	asset management	y
